PATENT APPLICATION

5 entitled: NURSERY CARE ARTICLE INTENDED FOR SUCTION BY
 AN INFANT

in the name of: Pierre GRASSET

10

ABSTRACT OF THE DISCLOSURE

15 This article for nursery care, which is in particular a feeding bottle or a
comforter, comprises a body, a tip for suction intended to penetrate at least
partially in an infant's mouth, as well as a member on which the infant's lips
abut during such suction.

 The hardness of the member on which the lips abut is clearly greater than
20 the hardness of the tip, with the result that suction is effected physiologically,
simulating breast-feeding.
